

Paulo Jerônimo's Résumé

Last update: 2026-08-11 15:31:16 UTC.

© DevOps and Site Reliability Engineer

I am [Paulo Jerônimo](#), a [Senior Full Stack Developer](#) with many years of experience acting as a [DevOps Engineer](#) and [SRE](#). With one of the DevOps practices, [CI/CD](#), my first contact was in 2011 using [Hudson](#) (renamed later to [Jenkins](#)). *Nowadays, I also have experience in setting pipelines with [GitHub Actions](#) or [AWS CodePipeline](#).* But, this contact is much more recent than my **experience with [Linux](#) (since 1993)** or as a **[Java](#) developer (since 1998)**.

So, related to programming in Java on Linux environments and automating steps using [Shell Script](#), my corporative tasks started **in 2002 (in this job)**. During that time, I made many [middleware](#) installations/ configurations and implementation of components on servers (like [Apache](#), [Tomcat](#), and [JBoss](#)).

Between 2003 and 2007, I [partnered with a Brazilian training company](#) offering architecture and software development consultancy. I provided excellent Java and XML courses to Brazilian market companies in this partnership. This and a deep understanding of middleware allowed me to [act as an expert JBoss specialist in Red Hat](#) and teach official JBoss courses through this company.

In 2008, I [accepted another big challenge](#). I started to program in [Python](#) while also applying my knowledge in [Bash](#) to use these tools for automating server installations and application component deployments. At that time, I was responsible for monitoring and analyzing logs and problems in a production environment for applications running in middlewares like [Tomcat](#), [JBoss](#), [Apache](#), and [Ngnix](#). I acted preemptively by using monitoring tools ([JON](#), [Nagios](#), and [Zabbix](#)) and reviewing logs. *Nowadays, if needed, I could use [Prometheus](#), [Grafana](#), and [Dynatrace](#) to do such a job.* When failures occurred, I was responsible for using tools to identify memory leaks and performance bottlenecks. I proactively interact with development, infrastructure, and operations teams. From that year onwards, I work in DevOps or SRE tasks on servers of private companies or the government. (Read more on this links: [CNPq](#), [TRF-1](#), [Caixa](#), [STN](#)).

I started to use and develop [Docker](#) containers **in 2014** when I spoke about it at [JUDCon](#) (a [Red Hat](#) event).

In 2015, I [returned to work as Software Architect](#) with more luggage in [Java EE](#), infrastructure, DevOps, and SRE. I used [Vagrant](#) in the automation of many environments and also to set up clusters and test labs of performance. *Nowadays, I prefer [Docker](#) or [Linux Containers](#) for this, but sometimes, I still use Vagrant to provision virtual machines that I create using [KVM](#) in my development environment.* With Vagrant, in addition to making advanced use of [Bash](#) for provisioning, I learned to program in [Ruby](#) and to use [Puppet](#) and [Ansible](#). *Nowadays, to assemble an entire infrastructure in a cloud, I use my CLI tool or [Terraform](#) (similar to Vagrant but different in purposes).*

In 2016 (working for [Red Hat](#)), I was responsible for upgrading dozens of [JBoss](#) servers on large companies ([B3](#) and [Previ](#)). This also involved updating the [Java](#) code of several applications. I

improved my skills in computer [security](#) issues such as [OpenSSL](#), [JWT](#), [OAuth](#), and [Keycloak](#) (or [RH-SSO](#) - the version supported by [Red Hat](#)). In addition, I learned a lot about [Kubernetes](#) and [OpenShift](#).

In 2017, I published videos about it and worked with its installation, configuration, and deployment of [microservices](#). Nowadays, I quickly install [Kubernetes](#) in a cloud (via [EKS](#) or [AKS](#)) or even in [Linux Containers](#). I learned [Amazon Web Services \(AWS\)](#) ([IAM](#), [EC2](#), and [S3](#), via [CLI](#)) and [Microsoft Azure](#). I created validator nodes for [Bitcoin](#) and [Ethereum](#) to study them in the latter.

In 2018, I gained more experience in [security](#) and [microservices](#) with [Spring Boot](#) running on [CloudFoundry](#) (working for [Thales](#) in Lisbon). I did some technical comparisons between [Keycloak](#) and [UAA](#). I started working with some tools for Big Data, such as [Spring Cloud Stream](#) and [Apache NiFi](#).

In 2019, I returned to Brazil and started a career more focused on [Web3](#) as a [Senior Full Stack Developer](#) in my own business.

In 2020, while working in partnership with a Linux company in Brazil, I improved on [OpenStack](#) and recorded videos about it. During this partnership, I also solved a severe problem for a law firm with [Passbolt](#) installed on the [Google Cloud Platform \(GCP\)](#). Nowadays, regarding [GCP](#), I also use [Firebase](#). In a contract with another employer ([ília](#)), I worked for a company ([Caixa Seguradora](#)) using [OpenShift](#) and [RH-SSO](#) in an even more specialized way. I was responsible for gluing their applications to [Keycloak](#) while, at the same time, building components and customizations to it. Also, in that job, I started to work with [Kafka](#).

In 2021, I specialized even more in AWS services. I developed an [event-driven](#) project for [OSO](#) involving, in addition to standard services, [Chalice](#), [Lambda](#), [Kinesis](#), and [EKS](#). Nowadays, I use [TypeScript](#) and [CDK](#) for [IaC](#).

So this is my whole story. I can now act in public or on-premise clouds. My current focus has been chiefly on using [Amazon Web Services \(AWS\)](#), but as I said, I also have occasional experiences with [Microsoft Azure](#) and [Google Cloud Platform \(GCP\)](#).

Read more about my use of these technologies in the section [📁 Professional Experience](#).

🔧 Technical Skills

- **I'm more focused on:** [Ubuntu](#), [Linux Containers](#), [Docker](#), [Kubernetes](#), [Cloud Platforms](#), [DevOps](#), [Blockchain](#), [Smart Contracts](#), [Ethereum](#), [Polygon](#), [Solidity](#), [Bash](#), [Java](#), [Spring](#), [Node.js](#), [npm](#), [pnpm](#), [TypeScript](#), [Nunjucks](#), [React](#), [React Native](#), [Next.js](#), [Svelte](#), [SvelteKit](#), [AsciiDoc](#), [Asciidoctor](#), [Termux](#), [Git](#), [GitHub](#), [Scrum](#);
- **Incomplete list of technologies I've used:** **Virtualization**, **Containers**, **Cloud Platforms**, **DevOps**: [Microsoft Azure](#), [Amazon Web Services \(AWS\)](#) ([IAM](#), [EC2](#), [Lambda](#), [SQS](#), [Kinesis](#), [DynamoDB](#), [CloudShell](#), [CodePipeline](#), [CodeBuild](#), [CodeDeploy](#)), [Google Cloud Platform \(GCP\)](#), [OpenStack](#), [OpenShift](#), [GitLab](#), [BitBucket](#), [Gradle](#), [Nexus](#), [Jenkins](#), [Travis CI](#), [Ansible](#), [VMware](#), [VirtualBox](#), [KVM](#), [Vagrant](#), [Terraform](#); **Operational Systems**: [macOS](#), [Fedora](#), [RHEL](#), [CentOS](#), [Arch Linux](#); **Agile Methodologies and Tools**: [Extreme Programming](#), [Kanban](#), [Continuous Integration](#); [Jira](#); **Programming Languages**: [Java](#), [Groovy](#), [Kotlin](#), [JavaScript](#), [Python](#), [Ruby](#), [Solidity](#), [C](#), [C++](#); **Testing**, **Code Quality**: [TDD](#), [BDD](#), [Integration Testing](#), [Acceptance Testing](#), [JUnit](#), [JMock](#), [Mockito](#), [Arquillian](#), [Cucumber](#), [Selenium](#), [Spek](#), [Spock](#), [Mocha](#), [Chai](#), [Jest](#), [SonarQube](#); **Text Editors**, **IDEs**: [Vim](#), [IntelliJ](#), [Visual Studio Code](#); **Java**: [Java EE](#), [Hibernate](#), [Spring](#), [Spring Boot](#), [JHipster](#), [Quarkus](#); **JavaScript**: [yarn](#), [Angular](#), [Puppeteer](#); **Python**: [Django](#), [Jinja](#), [Chalice](#); **API**: [Swagger](#), [Postman](#), [GraphQL](#); **Web**: [HTML](#), [CSS](#), [Sass](#), [Styled Components](#), [WebSocket](#); **Mobile**: [Kotlin](#); **Databases**: [MySQL](#), [MSQL](#), [Oracle](#), [PostgreSQL](#), [MongoDB](#); **Documentation**: [UML](#), [Markdown](#); **Command Line Tools**: [Tmux](#), [sed](#), [awk](#), [curl](#), [HTTPIe](#), [jq](#); **Configuration Languages**: [XML](#), [JSON](#), [YAML](#), [TOML](#), [Dhall](#); **Middleware**, **Big Data**: [Apache Tomcat](#), [JBoss EAP](#), [Wildfly](#), [Apache HTTP](#), [Ngnix](#), [RabbitMQ](#), [Kafka](#), [ELK Stack](#), [Apache NiFi](#), [Spring Cloud Data Flow](#); **Security**: [OpenSSL](#), [GnuPG](#), [Passbolt](#), [Spring Security](#), [OAuth](#), [OIDC](#), [Keycloak](#);

📁 Professional Experience

Dec/2025 to present - Founder at FMode Club - [FMode Club](#) is my current venture, where I build solutions using [AI Agents](#) and [AI Coding](#) techniques, for varied architectures and stacks, running on my own infrastructure. Each solution becomes material that the club members rebuild from scratch, since the real value lies in the process. My goal is to sharpen the technical skills of developers and founders so that they can build their own solutions, driving their own interactions with the agents.

Apr/2025 to Dec/2025 - Full Stack Developer at BNP Paribas - I worked for [BNP Paribas](#) through a consultancy ([HN Services](#)) in the project Scarlet. My main activities involved the development of [Java](#) / [Spring Boot](#) projects and their integration with tools such as [GitLab](#), [Argo CD](#), [Kubernetes](#), etc.

Nov/2024 to Apr/2025 - Software Developer at OSO (Fixed-term contract, 6 month) - Working for [OSO](#) for the second time ([see the first](#)), I worked on building two [Snowplow's Solution Accelerators](#) (open-source software - [1](#), [2](#), [3](#)). I also developed software (closed-source) for an internal project (Deetox - a [Python](#) project integrated with [OpenAI API's](#)) and for another [OSO's](#) customer ([Colliers](#)) where I worked with [Kafka](#) in a [.NET](#) project.

Sep/2023 to Oct/2024 - Senior Software Developer at GLS Group - Working for [GLS Group](#) as a Java Backend Developer through a consultancy ([HN Services](#)), I have been involved in modernising several projects developed by Team Pasteis (more than 20). The evolution consisted of updating the JDK versions and libraries used by the projects. With these updates, we have drastically reduced the

security vulnerabilities identified by [Snyk](#). Additionally, I have also worked on integrating the projects with [Keycloak](#), which is now responsible for the authentication and authorisation processes.

Oct/2019 to Aug/2023 - Founder and Web3 Developer of Finisher Tech - [Finisher Tech](#) was a personal project where I invested my time in developing software using technologies like [Blockchain](#), [Artificial Intelligence](#), and [Data Visualisation](#) to produce [Move-To-Earn DApps](#) for the wellness area. [Read more ...](#)

May/2022 to Jul/2022 - Senior Software Developer at ilia - I acted as a backend developer using JavaScript and TypeScript focusing on security issues ([as seen this video](#)). In parallel, I worked in the innovation area to bring a culture of developing decentralized applications (DApps) to the company using Blockchains such as Ethereum, Polygon, and NEAR. This educational process was initiated before I [rejoined ilia](#) as an employee by offering them [mentoring on Web3 technologies](#) through my own company. [Read more ...](#)

Apr/2021 to Aug/2021 - Senior Software Architect at Foton - Worked using Java and Java EE technologies in Open Banking solutions. [Read more ...](#)

Feb/2021 to Jul/2021 - Senior Software Developer at OSO - Working as a freelancer software developer using AWS technologies (like [Lambda](#) and [Kinesis](#)) and programming in Bash, Python, JavaScript and Java. [Read more ...](#)

Feb/2021 to Mar/2021 - Senior Software Architect at Basis - Worked at [Presidência da República](#) focused on develop a project using [Spring Boot](#), [Spring Cloud Stream](#) and [Kafka](#). [Read more ...](#)

Jul/2020 to Jan/2021 - Senior Software Architect at ilia - Worked at [Caixa Seguradora](#) focused on develop [RH-SSO \(Keycloak\)](#) software extensions (written in Java). [Read more ...](#)

Feb/2018 to Feb/2019 - Software Developer at Integer - Through this company and its partner ([Novabase](#)), I worked as an architect and software developer for [Thales Group](#) developing solutions at [Thales Ground Transportation System](#). [Read more ...](#)

Sep/2017 to Jan/2018 - Java Instructor at Oracle - Through [my company](#), I acted as a Java Instructor at [Oracle](#). [Read more](#)

Oct/2016 to Jan/2018 - Senior Consultant at Red Hat - Through [my company](#), I acted as a Senior Consultant at [Red Hat](#). [Read more](#)

Oct/2015 to Sep/2016 - Project Manager at Cebraspe - I led a small team (some few developers and DevOps guys). We designed a Computer Based Test (CBT) solution (programmed in [Node.js](#) to run on [Docker](#) containers). [Read more ...](#)

Feb/2015 to Sep/2015 - Middleware Specialist at Tecnisys - [Tecnisys](#) is a [Red Hat](#)'s partner. When I was working there, also, an [IBM](#) partner. I worked for this employer offering consulting and training services on Red Hat's Linux, middleware and cloud products, including the following servers / solutions: [OpenStack](#), [OpenShift](#), [JBoss EAP](#), [Wildfly](#), [JBoss ESB](#), [JBoss Fuse](#), [JBoss Data Virtualization](#), [JBoss AMQ](#), [JBoss Developer Studio](#), [JBoss BPM Suite](#), [JBoss BRMS](#). [Read more](#)

Sep/2014 to Jan/2018 - JBoss Instructor at Red Hat - I worked as a [Red Hat Certified Instructor](#)

(RHCI). See the list of my delivered training in the topic "[Delivered Courses](#)".

Sep/2014 to Mar/2015 - Java EE Architect at Ministério da Justiça - I was hired by [UNDP](#) as a [Java EE](#) consultant to build the architecture for [SISLEGIS application](#) and guide the development team to use [Java EE](#) best practices. [Read more ...](#)

Jun/2013 to Jun/2014 - Middleware Specialist at +2x - Acting for clients of the company, developing activities related to supporting for Linux servers ([CentOS](#), [RHEL](#), [Debian](#)) and middleware running [Apache HTTP](#), [Ngnix](#), [Apache Tomcat](#) or [JBoss EAP](#). Supporting for applications written in [Python](#), [PHP](#), and [Java](#). [Read more ...](#)

Jan/2013 to Jun/2013 - Java EE Architect at Capes - Participation in project development ([Java EE](#)) for the financial area of Capes, assisting in the implementation of a methodology of tests for applications (Test Drive Development (TDD)/ Behavior Driven Development (BDD)). [Read more ...](#)

Aug/2011 to Jun/2012 - Websphere Specialist at IBM - I worked in the [IBM WebSphere](#) team as a consultant/expert in [WebSphere Application Server \(WAS\)](#) and [IBM Business Monitor](#) (used to do Business Activity Monitoring (BAM)). [Read more ...](#)

Dec/2010 to Apr/2011 - Middleware Specialist at Algar - I worked in consulting and support services for JBoss, Oracle and Apache application servers, for [CNPq](#) client (📍 [Brasília](#)). [Read more ...](#)

Jan/2008 to Apr/2009 - JBoss Specialist at Ambima - I worked in supporting middleware's infrastructure that makes up the Selic application servers, at Central Bank (📍 [Rio de Janeiro](#)). [Read more ...](#)

Jul/2002 to Oct/2004 - Java EE Architect at Brasil Telecom - I did software architecture and development in Java, C, and C++ for many telecommunications applications. [Read more ...](#)

Sep/1999 to Jan/2018 - Self-employed at Paulo Jerônimo ME - Paulo Jerônimo Treinamentos Eireli-ME was the name of my own micro company. It was founded in September 1999 with the name **ALP Engenharia de Software Ltda**. For many years my company lived only attending some specify customers, without a trademark. Therefore, in April 2010, I decided to give it one: **Lado Servidor**. Using this name, I developed many works involving the creation of custom training to many customers. [Read more ...](#)

1993 to 1998 - Between these years I also developed many projects using COBOL, Pascal, [C](#), [C++](#) and Delphi. [Read more ...](#)

Education

Academic Background

 [Udacity/Woolf](#), 2025 → 2027

Master degree ([in progress](#)). Course: **Master of Science in Artificial Intelligence**.

 [Universidade de Brasília \(UnB\)](#), 2001 → 2002

Specialist degree. Course: **Distributed Systems and Object Orientation**.

 [Universidade Católica de Goiás \(UCG\)](#), 1994 → 1998

Bachelor's degree. Course: **Computer Science**.

Language Skills

Portuguese: Native language.

English: Fluent. Currently above CEFR Level B2. [Certified at B2 on 20 Jun 2022 via the British Council EnglishScore Core Skills test.](#)

Delivered Courses

As an instructor, I delivered over 3,400 hours of in-person tech training. Some of them were official courses (e.g., [Oracle](#) and [Red Hat](#)), and others I created for my company or partners. The file [delivered-courses.csv](#) shows my ongoing effort to stay current with evolving technologies.

Certifications

Data Streaming Engineer (Certified SME). May 21, 2025 - May 21, 2027. ([See certificate](#))

Red Hat Certified System Administrator (RHCSA). Jul 18, 2014 - Nov 01, 2018. ([See certificate](#))

Red Hat Certified JBoss Administrator (RHCJA). Jul 17, 2014 - Nov 01, 2018. ([See certificate](#))

Sun Certified Business Component Developer for the Java 2 Platform 1.3, Enterprise Edition (SCBCD). Feb 2007.

Sun Certified Programmer for the Java 2 Platform, Standard Edition 5.0 (SCJP). Feb 2007.

Sun Certified Web Component Developer for the Java 2 Platform 1.3 (SCWCD). Jun 2003

Sun Certified Programmer for the Java 2 Platform 1.2 (SCJP). May 2002.

Conferences & Presentations

I did [a lot of presentational talks](#) about many technical topics in Brazil. Currently I'm redirecting my efforts to produce online content on my video channels ([YouTube](#), [Odysee](#), and [Instagram](#)).
